Currie Rose Activity Update

Currie Rose Resources Inc. (TSX VENTURE: CUI) ("Currie" or "the Company") is pleased to provide an update on the Company's activities in Tanzania and Canada.

Tanzania, East Africa

Jubilee Reef Joint Venture

Jubilee Reef is a highly prospective gold project situated in the Siga Hills region of the Lake Victoria Gold Fields and hosting one of the first colonial gold mines in Tanzania – “Jubilee Reef”. The Licenses cover a prominent structural setting and after the success of the initial drilling program during 2011, JV partner Liontown Resources (ASX: LTR) is planning to drill approximately 10,000m (Aircore, Reverse Circulation (RC) and diamond) commencing Q2 of 2012. Drilling is expected to target the Panapendesa and Masabi Hill Prospects that returned results of up to 7m @ 5.6g/t gold and 27m@ 2.8g/t gold respectively (see Press Release dated:11 October 2011).

Liontown Resources can earn 75% interest in the joint venture by completing the planned exploration program and completion of a Definitive Feasibility Study.

Mabale Hills Project

At Currie’s 100% owned Mabale Hills Project on the eastern side of the Lake Victoria Gold Field, results from the outstanding 25 Rotary Air Blast (RAB) drill holes were received and returned disappointing results with no significant gold intercepts above 1g/t. However, trace gold worthy of additional work was returned.

The Mwamazengo discovery remains as the standout prospect of the Mabale Hills Project, with mineralisation extending over 200m and open at depth below 200m with previously reported RC and diamond drill intercepts including 34 m grading of 3.69 g/t from 3m, 12 m at 9.11 g/t from 57m, 63 m at 2.59 g/t from 37m, and 31 m at an average grade of 5.97 g/t from 29m. Drill intercepts from earlier campaigns have confirmed the presence of gold mineralisation within a BIF host. Mabale Hills is currently the subject of an internal review to determine the most appropriate action plan for the project.

Sekenke Joint Venture

During the 2011 field season, work by Currie consisted of geochemical sampling, geological mapping and general prospecting followed by first pass Rotary Air Blast (RAB) drilling. A number of co-incident gold anomalies were generated and RAB drilled. Unfortunately, no significant gold mineralisation was found to exist outside narrow (<1m), low grade quartz veins. As a result of these disappointing drill results, and a subsequent thorough review of the entire project, the Company has terminated the Sekenke joint venture retaining no on-going interest.

Canada

Scadding Project, Sudbury Ontario

The former gold producing Scadding Mine and surrounds have been the principal focus of JV partner Trueclaim Exploration (TSX.V – TRM). Over the winter, data compilation and preparation for drilling during the spring has been the central focus of activity. Trueclaim has compiled all the historical data and developed a good understanding of the gold mineralisation with considerable upside potential recognized at depth.

Trueclaim has earned a 51% interest in the project and Currie has a 49% carried interest through commercial production. Trueclaim has the option to increase its interest to 100% by paying Currie \$2,000,000 and retaining a 3% NSR royalty.

Project Generation

The Company is very active in pursuing other projects in other jurisdictions.

To date, none of the projects reviewed have met the Company's criteria and management is currently reviewing additional projects.

Currie has one million dollars in cash and is confident a project will be acquired in the near future.

The Company will update shareholders as investigations progress.

Additional information and public documents about Currie, can be viewed at the Company's website www.currierose.com or at www.sedar.com.

BY ORDER OF THE BOARD OF DIRECTORS OF
CURRIE ROSE RESOURCES INC.

"Harold Smith"

Harold Smith
President

The planning, execution and monitoring of quality control programs at the Sisu River project are under the supervision of Michael Griffiths, BSc Dip Ed, FAusIMM, GAICD, Currie's Director. Mr. Griffiths is the qualified persons as defined by National Instrument 43-101. Currie utilizes an industry standard QA/QC protocol with respect to sampling procedures. Blanks, and certified reference standards are inserted into the sample stream to monitor laboratory performance and duplicates of pulps and bulk rejects are also used to monitor laboratory performance.

Neither the TSX Venture Exchange nor its regulation services provider (as that term is defined in the policies of the TSX Venture Exchange) accepts responsibility for the adequacy or accuracy of this release.

“This news release includes certain forward-looking statements or information. All statements other than statements of historical fact included in this release, including, without limitation, statements relating to the potential mineralization and geological merits of the and properties and other future plans, objectives or expectations of the Company are forward-looking statements that involve various risks and uncertainties. There can be no assurance that such statements will prove to be accurate and actual results and future events could differ materially from those anticipated in such statements. Important factors that could cause actual results to differ materially from the Company's plans or expectations include risks relating to the actual results of current exploration activities, fluctuating gold prices, possibility of equipment breakdowns and delays, exploration cost overruns, availability of capital and financing, general economic, market or business conditions, regulatory changes, timeliness of government or regulatory approvals and other risks detailed herein and from time to time in the filings made by the Company with securities regulators. The Company expressly disclaims any intention or obligation to update or revise any forward-looking statements whether as a result of new information, future events or otherwise except as otherwise required by applicable securities legislation.”
